

## Little space big capacity

The system is small and compact, and most models can be installed in a kitchen cabinet or under the sink.

In spite of the small and compact design, the systems for private houses deliver from 350 to 2000 litres per hour depending on the model you choose.

## Tested and controlled .....

The Bin-X membrane systems are tested and controlled by some of the most renowned institutes and laboratories in Denmark, the leading country within environmental politics.

Contact us for more information, and let us help you find the right model for exactly your need and requirements.

**Finally**  
**- no more water bottles..!**

**Use a Bin-x filter system and get  
ultra clean drinking water  
directly from the tap.**

**NILE CLEAN WATER**

## Clean Tap Water

With a Bin-x filter system installed in your house, clean water is no longer a dream but a reality.

The system is VA-approved – to be used in connection with drinking water for tea- and coffee machines, cold drink and hot water-vending machines, ice cube machines, and technical water.

## Minimal Maintenance

By using the Danish Bin-x filter system you will remove calcium and minimize corrosion.\*

The system has an integrated timer that automatically ensures "backwash" thereby always keeping the membrane clean. The debris is automatically flushed to the drain.

Compared to the old fashioned filter systems the owner of the Bin-x has no manual maintenance work.

*\* The filter system has a pore size of 0,03  $\mu\text{m}$  which gives you an extraordinary retention of particles, bacteria, virus, iron and nutrients*

## 3 Clean Advantages

Ultra clean water in your water tap, coffee machine and ice cube machine is reason enough to buy the Bin-x filter system.

The system is compact and easy to install and in normal every day use there is no maintenance or excessive power consumption.

The built in timer ensures regular and automatic cleaning of the membrane using no chemicals – ensuring a good environment.
